"CDNA and amino acid sequences of Drosophila laminin B2 chain.";
Nucleic Acids Res. 16:7205-7205(1988).

-I- EUNCTION: BINDING TO CELLS VIA A HIGH AFFINITY RECEPTOR, LAMININ IS THOUGHT TO MEDIATE THE ATTACHMENT, MIGRATION, & ORGANIZATION CELLS INTO TISSUES DURING EMBRYONIC DEVELOPMENT BY INTERACTING WITH OTHER EXTRACELLULAR MATRIX COMPONENTS.

-I- SUBUNIT: LAMININ IS A COMPLEX GLYCOPROTEIN, CONSISTING OF THREE DUFFERENT POLYPEPTIDE CHAINS (ALPHA, BETA, GAMMA), WHICH ARE BOU TO EACH OTHER BY DISULFIDE BONDS INTO A CROSS-SHAPED MOLECULE COMPRISING ONE LONG & THREE SHORT ARMS WITH GLOBULES AT EACH ENDICATED SUBCELLULAR LOCATION: BASEMENT MEMBRANES (MAJOR COMPONENT).
                                                                                                                                                                                                                                                                                                 MEDLINE=88303364; PubMed=3405777;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   385
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides compositions comprising ospC protein chimeric ospC proteins from members of the Borrelia genus. These members burgdorferi, B. afzelii or B. garinii. These can be used vaccines against Borrelia infection, which is spread by ticks and to Lyme disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Compositions of OspC p

These may Borrelia burgdorferi, B. afzelli or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and lee to Lyme disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Compositions of OspC p

                                                                                                                                                                                                                                                                                    The present invention provides compositions comprising ospC prohimeric ospC proteins from members of the Borrelia genus. The Borrelia burgdorferi, B. afzelii or B. garinii. These can be u vaccines against Borrelia infection, which is spread by ticks to Lyme disease.
                                                                                                                                                                                                                                                                                                                                             Compositions of OspC polypeptides from strains of Borrelia which cause Lyme disease are used to immunize animals and detect immune responses
                                                                                                                                                                                                                                                                         Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides compositions comprising ospC proteins and chimeric ospC proteins from members of the Borrelia genus. These may be Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leads
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Compositions of OspC polypeptides Lyme disease are used to immunize to Lyme disease -

These may Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leaves the state of the spread by ticks and leaves the spread by tic

                                                                                                                                                                                                WPI; 200
                                                                     The present invention provides compositions comprising ospC proteins and chimeric ospC proteins from members of the Borrelia genus. These may be Borrelia burgdorferi, B. afzeli or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leads to Lyme disease.
                                                                                                                                                          Compositions of OspC polypeptides from strains of Borrelia which cause Lyme disease are used to immunize animals and detect immune responses to Lyme disease -
                                                                                                                                                                                                                                                 (UYNY )

                                                                                                                                                                                                                                                                                                                                                                                                     g
                      The present invention provides compositions comprising ospC proteins and chimeric ospC proteins from members of the Borrelia genus. These may be Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leads
                                                                   Claim
                                                                                    Compositions of OspC polypeptides from strains of Borrelia which Lyme disease are used to immunize animals and detect immune responded to Lyme disease.
